Strong Duality

Theorem 2 (Strong Duality)

Let P and D be a primal dual pair of linear programs, and let z^* and w^* denote the optimal solution to P and D, respectively. Then

 $z^* = w^*$

Lemma 3 (Weierstrass)

Let X be a compact set and let f(x) be a continuous function on X. Then $\min\{f(x) : x \in X\}$ exists.

Lemma 4 (Projection Lemma)

Let $X \subseteq \mathbb{R}^m$ be a non-empty convex set, and let $y \notin X$. Then there exist $x^* \in X$ with minimum distance from y. Moreover for all $x \in X$ we have $(y - x^*)^T (x - x^*) \le 0$.

▲ □ ▶ ▲ ■ ▶ ▲ ■ ▶
87/491

• Define f(x) = ||y - x||.

- We want to apply Weierstrass but *X* may not be bounded.
- $X \neq \emptyset$. Hence, there exists $x' \in X$.
- Define $X' = \{x \in X \mid ||y x|| \le ||y x'||\}$. This set is closed and bounded.
- Applying Weierstrass gives the existence.

5.4 Strong Duality B

◆ 億 ▶ < 불 ▶ < 불 ▶ 89/491

 x^* is minimum. Hence $||y - x^*||^2 \le ||y - x||^2$ for all $x \in X$.

 x^* is minimum. Hence $\|y - x^*\|^2 \le \|y - x\|^2$ for all $x \in X$.

By convexity: $x \in X$ then $x^* + \epsilon(x - x^*) \in X$ for all $0 \le \epsilon \le 1$.

 x^* is minimum. Hence $\|y - x^*\|^2 \le \|y - x\|^2$ for all $x \in X$.

By convexity: $x \in X$ then $x^* + \epsilon(x - x^*) \in X$ for all $0 \le \epsilon \le 1$.

 $\|\boldsymbol{y} - \boldsymbol{x}^*\|^2$

 x^* is minimum. Hence $\|y - x^*\|^2 \le \|y - x\|^2$ for all $x \in X$.

By convexity: $x \in X$ then $x^* + \epsilon(x - x^*) \in X$ for all $0 \le \epsilon \le 1$.

$$\|y - x^*\|^2 \le \|y - x^* - \epsilon(x - x^*)\|^2$$

 x^* is minimum. Hence $\|y - x^*\|^2 \le \|y - x\|^2$ for all $x \in X$.

By convexity: $x \in X$ then $x^* + \epsilon(x - x^*) \in X$ for all $0 \le \epsilon \le 1$.

$$\begin{aligned} \|y - x^*\|^2 &\leq \|y - x^* - \epsilon(x - x^*)\|^2 \\ &= \|y - x^*\|^2 + \epsilon^2 \|x - x^*\|^2 - 2\epsilon(y - x^*)^T (x - x^*) \end{aligned}$$

 x^* is minimum. Hence $\|y - x^*\|^2 \le \|y - x\|^2$ for all $x \in X$.

By convexity: $x \in X$ then $x^* + \epsilon(x - x^*) \in X$ for all $0 \le \epsilon \le 1$.

$$\begin{aligned} \|y - x^*\|^2 &\leq \|y - x^* - \epsilon(x - x^*)\|^2 \\ &= \|y - x^*\|^2 + \epsilon^2 \|x - x^*\|^2 - 2\epsilon(y - x^*)^T (x - x^*) \end{aligned}$$

Hence, $(y - x^*)^T (x - x^*) \le \frac{1}{2} \epsilon ||x - x^*||^2$.

 x^* is minimum. Hence $\|y - x^*\|^2 \le \|y - x\|^2$ for all $x \in X$.

By convexity: $x \in X$ then $x^* + \epsilon(x - x^*) \in X$ for all $0 \le \epsilon \le 1$.

$$\begin{aligned} \|y - x^*\|^2 &\leq \|y - x^* - \epsilon(x - x^*)\|^2 \\ &= \|y - x^*\|^2 + \epsilon^2 \|x - x^*\|^2 - 2\epsilon(y - x^*)^T (x - x^*) \end{aligned}$$

Hence, $(y - x^*)^T (x - x^*) \le \frac{1}{2} \epsilon ||x - x^*||^2$.

Letting $\epsilon \rightarrow 0$ gives the result.

Theorem 5 (Separating Hyperplane)

Let $X \subseteq \mathbb{R}^m$ be a non-empty closed convex set, and let $y \notin X$. Then there exists a separating hyperplane $\{x \in \mathbb{R} : a^T x = \alpha\}$ where $a \in \mathbb{R}^m$, $\alpha \in \mathbb{R}$ that separates y from X. $(a^T y < \alpha; a^T x \ge \alpha \text{ for all } x \in X)$

- Let $x^* \in X$ be closest point to y in X.
- By previous lemma $(y x^*)^T (x x^*) \le 0$ for all $x \in X$.
- Choose $a = (x^* y)$ and $\alpha = a^T x^*$.
- For $x \in X$: $a^T(x x^*) \ge 0$, and, hence, $a^T x \ge \alpha$.
- Also, $a^T y = a^T (x^* a) = \alpha ||a||^2 < \alpha$

Lemma 6 (Farkas Lemma)

Let A be an $m \times n$ matrix, $b \in \mathbb{R}^m$. Then exactly one of the following statements holds.

- **1.** $\exists x \in \mathbb{R}^n$ with Ax = b, $x \ge 0$
- **2.** $\exists y \in \mathbb{R}^m$ with $A^T y \ge 0$, $b^T y < 0$

Assume \hat{x} satisfies 1. and \hat{y} satisfies 2. Then

 $0 > y^T b = y^T A x \ge 0$

Hence, at most one of the statements can hold.

Lemma 6 (Farkas Lemma)

Let A be an $m \times n$ matrix, $b \in \mathbb{R}^m$. Then exactly one of the following statements holds.

- **1.** $\exists x \in \mathbb{R}^n$ with $Ax = b, x \ge 0$
- **2.** $\exists y \in \mathbb{R}^m$ with $A^T y \ge 0$, $b^T y < 0$

Assume \hat{x} satisfies 1. and \hat{y} satisfies 2. Then

 $0 > y^T b = y^T A x \ge 0$

Hence, at most one of the statements can hold.

2. $\exists y \in \mathbb{R}^m$ with $\begin{bmatrix} A^T \\ I \end{bmatrix} y \ge 0, b^T y < 0$

Proof of Strong Duality

$$P: z = \max\{c^T x \mid Ax \le b, x \ge 0\}$$

$$D: w = \min\{b^T y \mid A^T y \ge c, y \ge 0\}$$

Theorem 8 (Strong Duality)

Let P and D be a primal dual pair of linear programs, and let z and w denote the optimal solution to P and D, respectively (i.e., P and D are non-empty). Then

z = w .

5.4 Strong Duality B

 $z \leq w$: follows from weak duality

5.4 Strong Duality B

- $z \leq w$: follows from weak duality
- $z \ge w$:

- $z \leq w$: follows from weak duality
- $z \ge w$:
- We show $z < \alpha$ implies $w < \alpha$.

 $z \leq w$: follows from weak duality

 $z \geq w$:

We show $z < \alpha$ implies $w < \alpha$.

 $\exists x \in \mathbb{R}^n$ s.t. $Ax \leq b$ $-c^T x \leq -\alpha$ $x \geq 0$

 $z \leq w$: follows from weak duality

 $z \ge w$:

We show $z < \alpha$ implies $w < \alpha$.

$\exists x \in \mathbb{R}^n$				$\exists y \in \mathbb{R}^m; v \in \mathbb{R}$,
s.t.	Ax	\leq	b	s.t. $A^T y - c v$	\geq	0
	$-c^T x$	\leq	$-\alpha$	$b^T y - \alpha v$	<	0
	x	\geq	0	<i>y</i> , <i>v</i>	\geq	0

 $z \leq w$: follows from weak duality

 $z \geq w$:

We show $z < \alpha$ implies $w < \alpha$.

$$\exists x \in \mathbb{R}^{n} \\ \text{s.t.} \quad Ax \leq b \\ -c^{T}x \leq -\alpha \\ x \geq 0 \end{cases} \quad \begin{array}{l} \exists y \in \mathbb{R}^{m}; v \in \mathbb{R} \\ \text{s.t.} \quad A^{T}y - cv \geq 0 \\ b^{T}y - \alpha v < 0 \\ y, v \geq 0 \end{array}$$

From the definition of α we know that the first system is infeasible; hence the second must be feasible.

$$\begin{array}{c|c} \exists y \in \mathbb{R}^m; v \in \mathbb{R} \\ \text{s.t.} \quad A^T y - v \geq 0 \\ b^T y - \alpha v < 0 \\ y, v \geq 0 \end{array} \end{array}$$

$$\exists y \in \mathbb{R}^{m}; v \in \mathbb{R}$$
s.t. $A^{T}y - v \geq 0$
 $b^{T}y - \alpha v < 0$
 $y, v \geq 0$

If the solution y, v has v = 0 we have that

$$\exists y \in \mathbb{R}^m \\ \text{s.t.} \quad A^T y \ge 0 \\ b^T y < 0 \\ y \ge 0$$

is feasible.

5.4 Strong Duality B

$$\exists y \in \mathbb{R}^{m}; v \in \mathbb{R} \\ s.t. \quad A^{T}y - v \geq 0 \\ b^{T}y - \alpha v < 0 \\ y, v \geq 0 \\ \end{cases}$$

If the solution y, v has v = 0 we have that

$$\exists y \in \mathbb{R}^m$$

s.t. $A^T y \ge 0$
 $b^T y < 0$
 $y \ge 0$

is feasible. By Farkas lemma this gives that LP P is infeasible. Contradiction to the assumption of the lemma.

Hence, there exists a solution y, v with v > 0.

We can rescale this solution (scaling both y and v) s.t. v = 1.

Then y is feasible for the dual but $b^T y < \alpha$. This means that $w < \alpha$.

Hence, there exists a solution y, v with v > 0.

We can rescale this solution (scaling both y and v) s.t. v = 1. Then y is feasible for the dual but $b^T y < \alpha$. This means that $w < \alpha$.

Hence, there exists a solution y, v with v > 0.

We can rescale this solution (scaling both y and v) s.t. v = 1.

Then y is feasible for the dual but $b^T y < \alpha$. This means that $w < \alpha$.

Hence, there exists a solution y, v with v > 0.

We can rescale this solution (scaling both y and v) s.t. v = 1.

Then y is feasible for the dual but $b^T y < \alpha$. This means that $w < \alpha$.

Definition 9 (Linear Programming Problem (LP))

Let $A \in \mathbb{Q}^{m \times n}$, $b \in \mathbb{Q}^m$, $c \in \mathbb{Q}^n$, $\alpha \in \mathbb{Q}$. Does there exist $x \in \mathbb{Q}^n$ s.t. Ax = b, $x \ge 0$, $c^T x \ge \alpha$?

Questions:

- Is LP in NP?
- Is LP in co-NP? yes!
- Is LP in P?

Proof:

- Given a primal maximization problem (% and a parameter co-Suppose that or = 0.00 (%).
- We can prove this by providing an optimal basis for the dual.
- A verifier can check that the associated dual solution fulfills
